

## Math Bingo

This math game is sure to become a fast favorite with your students. You can choose whatever skill you want to review, such as addition, subtraction, or number sequencing. The game works just like regular bingo, except students have to solve math problems in order to know what number to mark off of their sheet.

To prepare, make a list of 25 math problems (e.g.  $2+1$ ,  $3-0$ , or  $2, 4, 6, \_$ ). Write the answers on the same sheet of paper.

Create your own 5x5 bingo cards or generate them online. At random, write the answers on the cards using the solutions from your list. There should be a bingo card for each student playing. You can laminate the cards to use for next time and have students place pennies or rocks to mark their answers.
