

TOP TEN REASONS TO STUDY MATH

#1 When the teacher talks about an acute angle, you'll know she's not referring to how attractive the angle is.

#2 If you can't count to a million, how will you know if you've become a millionaire?

#3 You'll realize that a factor tree is not the oak next to the school parking lot.

#4 Studying pi is simply delicious!

#5 You will learn that irrational numbers really do make sense.

#6 You'll realize that place value doesn't refer to how close your desk is to the pencil sharpener.

#7 You'll understand that the distributive property has nothing to do with real estate.

#8 Solving word problems could lead to solving real problems!

#9 You'll know that a negative number isn't a number with an attitude problem!

#10 You will learn that Dewey didn't invent the decimal. Do you know who "Dewey" is?
